## Question 1

In the following, I count the number of different types of **transType** in the web tracking data. I do this by grouping by the **transType** variable and using the function `count()`.

```
##
## Attaching package: 'dplyr'

## The following objects are masked from 'package:stats':
##
##   filter, lag

## The following objects are masked from 'package:base':
##
##   intersect, setdiff, setequal, union

## # A tibble: 6 x 2
## # Groups:   transType [6]
##   transType      n
##   <chr>      <int>
## 1 auto_bookmark    3
## 2 form_submit     26
## 3 generated       20
## 4 link          129
## 5 reload          9
## 6 typed           4
```
